## **DETAILED ACTION**

### ***Response to Amendment***

The declaration filed on February 11, 2003 under 37 CFR 1.131 is sufficient to overcome the Patterson, III reference.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4,8-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-4,19 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: the step of obtaining the headroom. Applicant's reliance on the circuit "operating correctly" does not recite the necessary steps within the claims to obtain the necessary headroom by using three volts and not using alternating current.

Regarding claims 8-17,

It is not clear within the claim language how applicant obtains "an amount of current" because no structure for generating a "current substantially equal to a second amount of current" has been recited.

Regarding claim 18,

Applicant has recited a "generating means" for generating two amounts current, disclosed in the specifications of the invention on page 3 lines 8 and 9 describe only generating an amount of current equal to modulation current and bias current, however there is no discussion, structure or function as to how the generating means is operating the circuit correctly.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Link (PN 5,883,910).

Figure 4 illustrates a pair of transistors (Q1,Q2) for driving a semiconductor laser provided with a supply voltage within the range of 3V-5.5V, where the circuit is provided with two current sources I<sub>bias</sub> and I<sub>mod</sub>. The transistors each having an input for

purposes of switching and driving the laser, as is well known in the art. In column 4 lines 29-41, disclose the circuit having voltage headroom of 1 volt.
